

WHAT IS CLAIMED IS:

1. A compound container comprising a body made of a transparent material, a metal ring made of stainless steel and fixed tightly and covering around an upper  
5 open end of said body, a metal base adhered under a lower side of the bottom of said body by means of high frequency, said container looking pretty by the brilliancy of said metal ring and of said metal base and the transparency of said body and their color diversity.

10 2. The compound container as claimed in Claim 1, wherein said metal base has a multi-angled hole in the center of the bottom, said post-like projection of the bottom of said body fitting securely in said multi-angled hole of said metal base so that the combination of said  
15 body and said metal base is tight, not letting said metal base rotate a bit.

3. The compound container as claimed in Claim 1, wherein said metal base has a shallow recess formed in an upper surface of the bottom, and an anti-slip sheet is  
20 adhered on said shallow recess for keeping said body to be positioned stably thereon.

4. The compound container as claimed in Claim 1, wherein said container is shaped as a cup, a bottle, a jar, a saucer, a dish, a plate, a can or a pail.
